

Vision Model Benchmark

German Sales-Slip OCR · 2026-06-08 · NVIDIA RTX A2000 8GB Laptop GPU, 8192 MiB

Task: Extract the total amount from German grocery / gas sales slips. Each model receives the raw JPEG (resized ≤ 1500 px longest side) and a fixed prompt asking for the sum in *Euro,Cent* format. **Accuracy** = share of 3 annotated test images where the extracted value matches the ground truth encoded in the filename (*slip0_7949.jpg* $\rightarrow$ 79,49 €). Models marked *archived* were tested in an earlier run and removed from disk afterwards.

Leaderboard

#	Model	Size	Accuracy	Avg latency	On disk
1	Llama 3.2-Vision 11B	~7.9 GB	3/3 (100 %)	11.5 s	archived
2	Qwen3-VL 4B	~3.3 GB	3/3 (100 %)	15.3 s	archived

Prompt: What is the sum to pay in the given sales slip? It is a German sales slip for groceries or gas. Look for 'Summe', 'Gesamt' or 'zu zahlen'. Reply with ONLY the amount in the format 'Euro,Cent' (e.g. '79,49'). No currency symbol, no extra text. If not found, reply 'NaN'.
